

# Edina Tóth

## Senior Frontend Developer

---

### Summary

Senior Frontend Developer with 7+ years of experience building enterprise web applications using React, Angular, TypeScript and modern frontend architecture. Strong background in MedTech, healthcare systems and complex business platforms. Experienced in translating Figma designs and business requirements into scalable, high-performance user interfaces. Proven expertise in state management, performance optimization and Agile delivery.

2310, Szigetszentmiklós

### Technical Skills

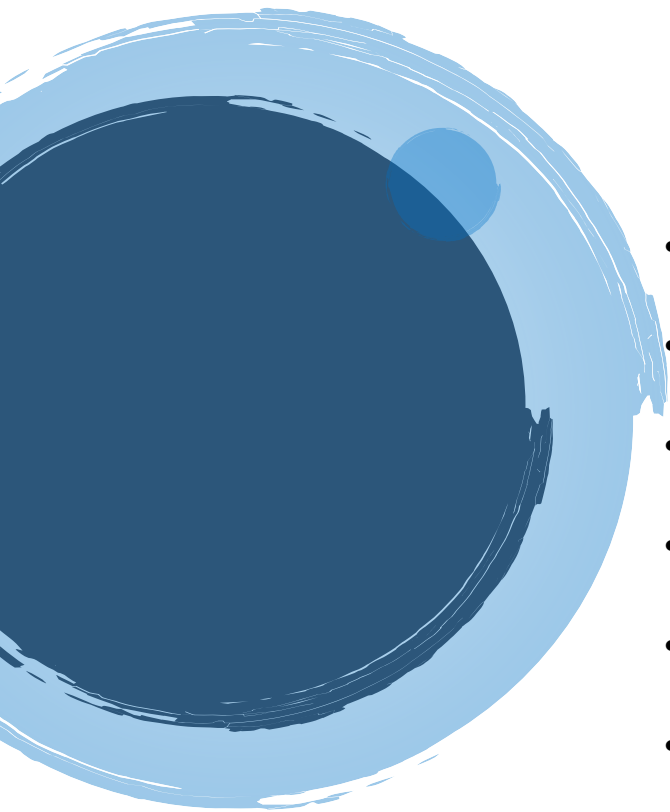

React • Angular • TypeScript • JavaScript • RxJS • Redux • NgRx • HTML5 • SCSS • REST APIs • Jest • Jasmine • Karma • Figma • Performance Optimization • Agile/Scrum • Git • Healthcare Systems

### Work experience

**Senior Frontend developer**, 07/2025 – Present

Neunos Zrt – Budapest

- Leading frontend development of enterprise-scale web applications using React, TypeScript and RxJS.
- Designing scalable and maintainable frontend architecture for complex business systems.
- Developing reusable UI components and responsive interfaces based on Figma designs.
- Translating analyst requirements and business workflows into user-friendly digital solutions.
- Building dashboards, admin portals and workflow-driven interfaces.

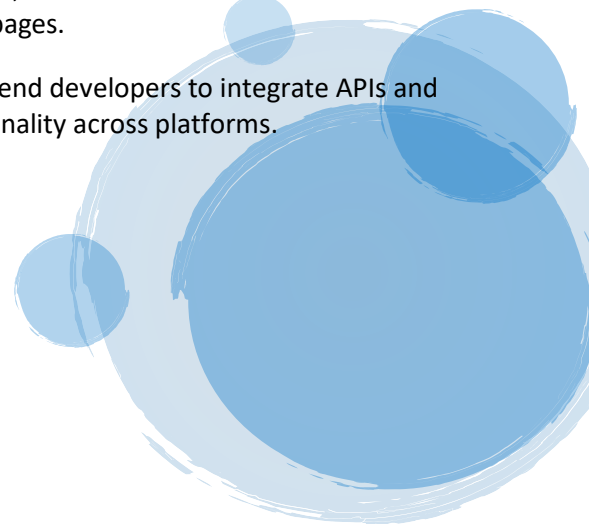

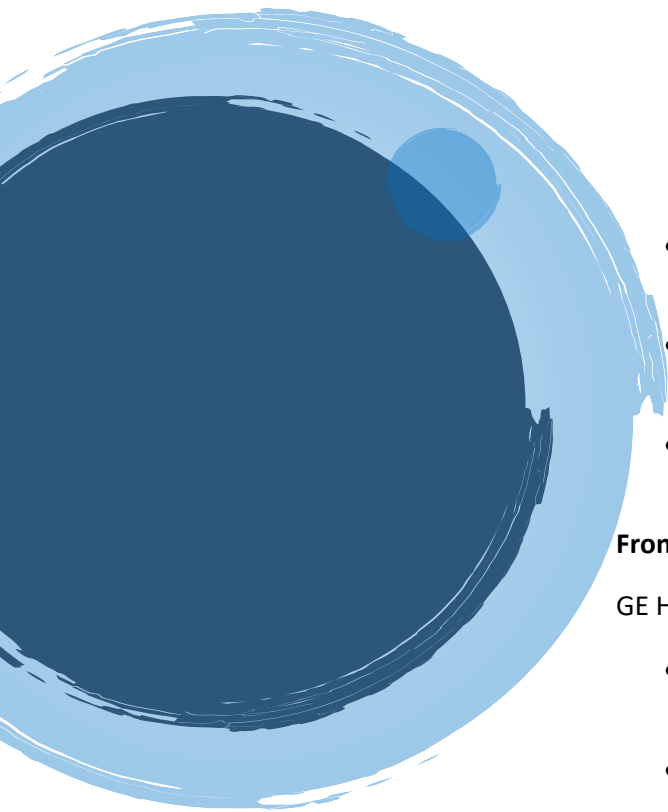

- Implementing advanced state management solutions using Redux principles for scalable enterprise applications.
- Refactoring legacy frontend modules into modern React component-driven architecture.
- Performance optimization including lazy loading, code splitting and rendering improvements.
- REST API integration and handling complex business logic across multiple modules.
- Delivering clinician-style and business workflow interfaces focused on usability and precision.
- Code reviews, engineering standards and unit testing with Karma, Jasmine, Jest and modern testing practices.
- Daily English communication with international stakeholders.
- Continuously researching modern frontend technologies and proposing improvements to increase delivery efficiency.

#### **Frontend developer, 01/2021 – 07/2025**

Nexius Learning - Budapest

- Development of education and learning management software using Angular 12+ and TypeScript
- Implementation of unit testing with Karma and Jasmine to ensure software quality
- Participated in agile development processes, contributing to sprint planning, stand-ups, and retrospectives.
- Reviewed and optimised existing website code, achieving significant improvements in performance and maintainability.
- Utilised JavaScript, HTML, and CSS to create interactive and visually appealing web pages.
- Collaborated with back-end developers to integrate APIs and ensure seamless functionality across platforms.

- Participated in code reviews, contributing to the improvement of project quality and team standards.
- Developed user-friendly website interfaces using HTML, CSS, and JavaScript for enhanced user experience.
- Developed and maintained responsive website designs, improving user experience across various devices.

**Frontend developer, 01/2019 - 01/2021**

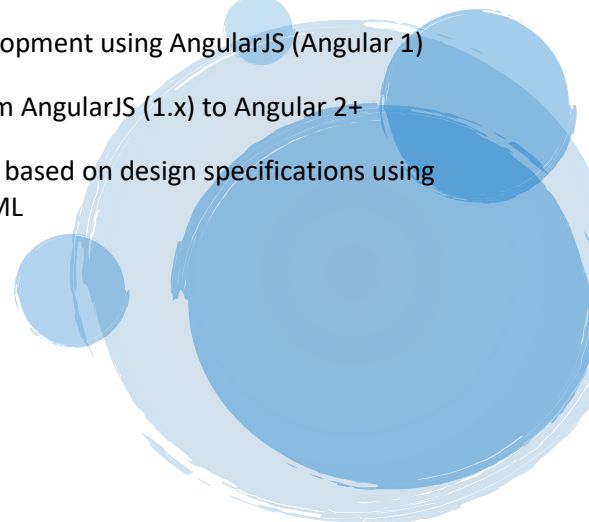

GE Healthcare - Budapest

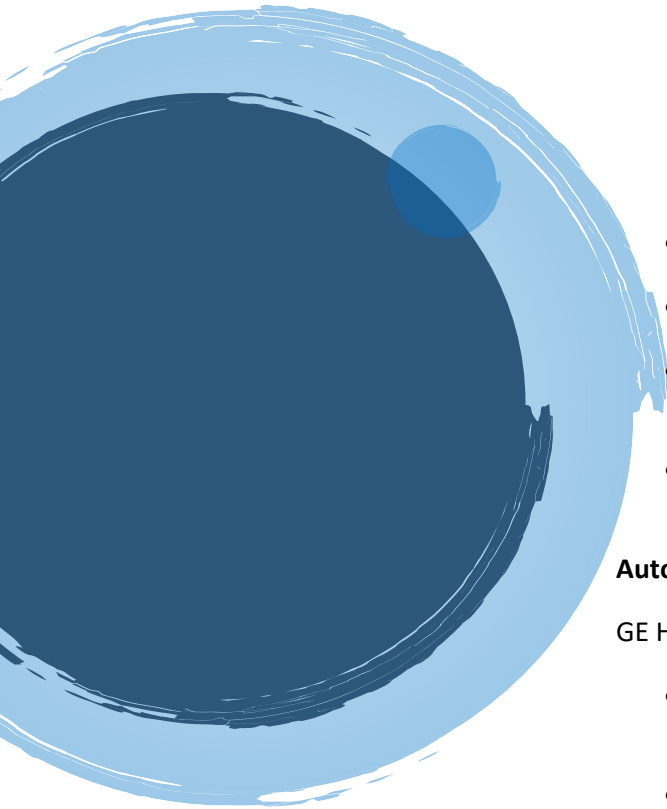

- Development of a system for tracking the repair and lifecycle of aircraft turbine components
- Business software development using React
- Front-end implementation based on design specifications, utilizing SCSS and HTML
- Creation of unit tests with Jest and Enzyme to ensure reliability
- Establishing and managing state using Redux
- Developed user-friendly website interfaces using HTML, CSS, and JavaScript for enhanced user experience.
- Utilised JavaScript, HTML, and CSS to create interactive and visually appealing web pages.
- Collaborated with back-end developers to integrate APIs and ensure seamless functionality across platforms.
- Participated in code reviews, contributing to the improvement of project quality and team standards.

**Frontend developer, 01/2017 - 01/2018**

GE Healthcare - Budapest

- Development of a component tracking system
- Business software development using AngularJS (Angular 1)
- Migrating codebase from AngularJS (1.x) to Angular 2+
- Front-end development based on design specifications using CSS, Bootstrap, and HTML

- Writing unit tests with Karma and Jasmine
- Introducing NGRX for state management in the project
- Developed user-friendly website interfaces using HTML, CSS, and JavaScript for enhanced user experience.
- Researched new web technologies and trends, recommending implementations to keep websites current.

**Automation Engineer, 01/2015 - 01/2017**

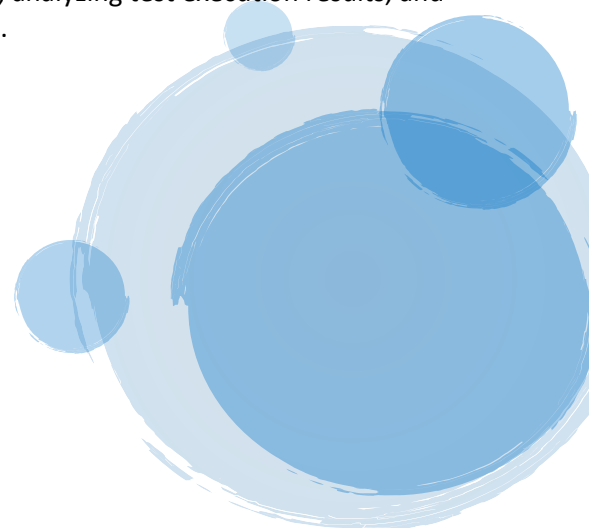

GE Healthcare - Budapest

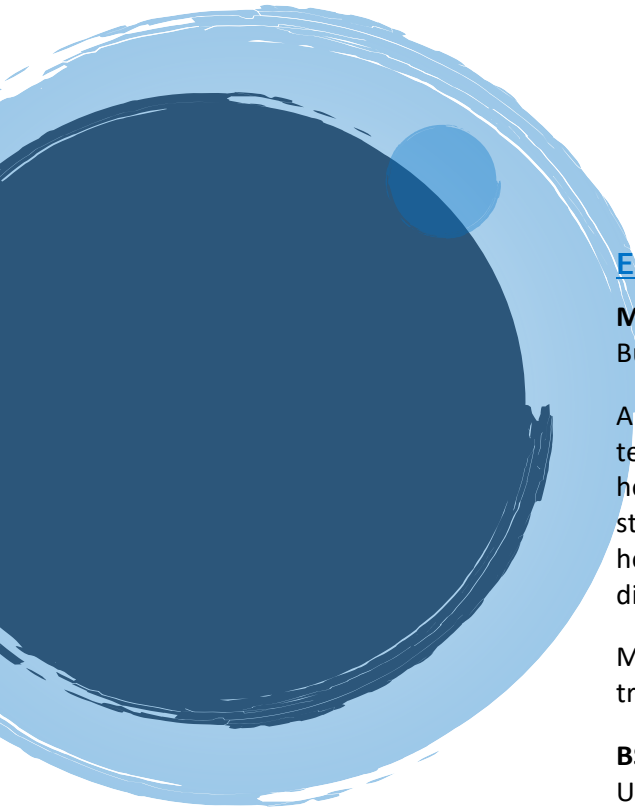

- Responsible for testing radiological systems to ensure functionality and reliability.
- Key responsibilities included writing tests in Visual Basic scripting language, maintaining legacy tests, and developing a custom test framework.
- Analyzed the results of test executions to identify issues and improve system performance.
- Performed manual verification tests to ensure accuracy and compliance with specifications.
- Set up automation frameworks, tools and methodology.
- Analysed workflow processes to identify automation opportunities, streamlining operations and enhancing throughput.

**Automation Engineer Intern, 01/2014 - 01/2015**

GE Healthcare

- Testing of mammography hardware and software to ensure proper functionality.
- Key responsibilities included writing automated tests in TCL for mammography systems, analyzing test execution results, and maintaining legacy tests.

## EDUCATION

### **Msc, Biomedical Engineer, 01/2017**

Budapest University of Technology

A biomedical engineers designs, develops, and optimizes healthcare technologies and systems. We work to improve medical devices, healthcare software, and processes, ensuring we meet industry standards and enhance patient care. We often collaborate with healthcare professionals to implement innovative solutions for medical diagnostics, treatment, and management.

Medical degree and thesis: Classification of hemorrhages caused by traumatic brain strokes using an automated algorithm.

### **BSc, Computer Science, 01/2014**

University of Szeged

A Bachelor's degree in Computer Engineering focuses on the fundamentals of software and hardware development, including programming, computer architecture, data structures, networks, and embedded systems. Students learn to design, implement, and optimize software and hardware solutions for various applications.

Thesis: Development of a Bluetooth-based ECG system (hardware/software).

### **High School, Faculty of Informatics, 01/2007**

Horvath Mihaly High School - Szentes
